New cashpoint and cloakroom locking system at FILDORADO in Filderstadt makes it a pleasure to check in and out

Within the framework of major modification work, eccos pro's mafis[®] guest management system for admission and payment including a "non-contact" SAFE-O-TRONIC[®] cloakroom locking system was installed and successfully commissioned in the spring of 2007 at the FILDORADO sport and leisure swimming facilities in Filderstadt.

Themed "the convenient and cashless way to enjoy the day", a 13,500 square metre adventure, wellness and fitness area including catering is now available for use to guests wearing the transponder wristband. The changing lockers can also be opened and locked quickly and easily. Just tap with the transponder and the locker door opens up. Payment is made when checking out – in cash or by means of a prepaid or ec card. The chip wristband is automatically "swallowed" when passing through the exit turnstile.

FILDORADO's managing director, Wolfgang Hermle, is delighted with the high degree of operating safety of the new cashpoint and cloakroom system and the exact statistical reporting for his business analysis: "Conversion to the mafis[®] admission and payment system went off without a hitch for all concerned. All data, for example regarding numbers of visitors, length of stay, sales or utilised capacity, can be called up reliably and concisely at the push of a button - and the operation of the locks on the lockers are now definitely more customer-friendly."
